FOR IMMEDIATE RELEASE

## **Subaru of America Marks 50th Anniversary: Automaker Celebrates with Employees as NJ-based Company Reaches 50 Years in America**

### **Celebratory bronze plaque by local artist Chad Fisher unveiled**

**CHERRY HILL, NJ – February 15, 2018** – Subaru of America, Inc. (SOA) today marked its [50th Anniversary](#) with a ceremony for its 500+ employees at the automaker's Cherry Hill, NJ headquarters (HQ) conducted by President and COO, Thomas J. Doll.

Doll and Subaru employees, dressed in matching gold 50<sup>th</sup> anniversary T-shirts, counted down to zero on a 50<sup>th</sup> anniversary digital clock that has been marking down days in Subaru HQ for a year. Following a round of joyful applause, Doll unveiled a 3-by-4-foot, 300-pound bronze plaque, produced by local artist [Chad Fisher](#). Taking inspiration from 'The Stars of our Future,' the plaque depicts two Subaru employees and the famous Subaru six-star cluster logo.

"This was a great way to celebrate turning 50," said Doll. "This company has seen so much in its 50 years, and now we can mark this anniversary on the back of 10 years of sales increases. Our employees are our bedrock and that's why we are celebrating them with the amazing plaque by Chad Fisher, which represents our employees, retailers and customers. The plaque will last for the next 50,000 years and, as we have a bright future ahead of us, we very much look forward to what the next 50 years will bring for Subaru."

To kick off the year of celebrations in 2017, in a way that embodies the automaker's spirit of supporting good causes and the local community, SOA donated 50 new 2018 Subaru Outback vehicles to select Meals on Wheels programs throughout the country to be used in the delivery of an estimated 53,000 meals to an additional 3,700 seniors across 39 states. The company's ['50 Cars for 50 Years' vehicle donation](#) will enable Meals on Wheels programs to deliver more nutritious meals and moments of companionship, expanding its reach to seniors in need.

Fresh on the heels of celebrating its golden anniversary, SOA will move to an all-new corporate headquarters in Camden, NJ in May 2018, bringing several offices under one new roof.

### **Company History**

The company was founded on February 15, 1968 by two American businessmen: Malcolm Bricklin and Harvey Lamm. In 1965 Malcolm Bricklin was selling franchises for motor scooters that included the Fuji Rabbit and the tiny Subaru 360. Bricklin then formed Subaru of America, Inc. (SOA) in order to sell Subaru franchises with Harvey Lamm who was the son of a furniture salesman in Philadelphia. From 1967 to 1990, Lamm served as chairman of the board, chief executive officer, president and chief operating officer of Subaru of America, Inc.

The very first Subaru 'office' was in fact a small rental unit in Balboa Park, California, which Lamm set-up in 1967. The following year, Subaru of America was officially established in Bala Cynwyd, Pennsylvania before moving to larger quarters in Pennsauken, New Jersey in 1970. The headquarters moved to its current Cherry Hill, New Jersey location in October 1986. SOA is currently developing a new headquarters complex in Camden, New Jersey, which is expected to open in May 2018.

In the early years, Bricklin and Lamm's business model was to sell distributor franchises to investors across the country, resulting in a total of 13 distributors nationwide. In subsequent years, SOA bought out most of the original distributors, with the exceptions of Subaru of New England (SNE) and Subaru Distribution Corp. (SDC) which covers NY and parts of NJ.

On August 31, 1990, Fuji Heavy Industries (FHI) acquired Subaru of America through a \$6 per share cash offer. FHI had already purchased just under half of SOA stock from prior investments.

### **Meaning of the Subaru Name**

Fuji Heavy Industries (renamed [Subaru Corporation](#) in April 2017) traces its roots to the Nakajima Aircraft Company, a leading Japanese aircraft manufacturer. By 1950, Nakajima was known as Fuji Heavy Industries and FHI was incorporated on July 15, 1953 when five Japanese companies, known as Fuji Kogyo, Fuji Jidosha Kogyo, Omiya Fuji Kogyo, Utsunomiya Sharyo and Tokyo Fuji Sangyo, joined together. The Subaru name means "unite" in Japanese. The company logo is the cluster of six stars recognized by the Japanese in the star constellation Pleiades (Subaru in Japanese).

### **1968-1988**

The first Subaru - the 360 - reached the United States in May 1968. Priced at \$1,290, it was \$300 cheaper than the similar-looking Volkswagen Beetle and was 1,000 pounds lighter. This made it exempt from federal safety standards, and the car was required to meet only the less-stringent standards of individual states. In contrast to the company's modern reputation for safety, Consumer Reports rated the 360 as "unacceptable", which quickly affected sales.

A larger model was needed, and in 1970, Subaru developed the FF-1. The front-drive FF-1 was handy for driving in snow and gave Subaru a new market position as the first Japanese manufacturer to feature front-wheel drive, as well as the first Subaru vehicle to have the horizontally-opposed "boxer" engine. The FF-1 was replaced by the larger, more powerful Leone series in 1973, which was marketed simply as either a DL or GL model regardless of body style,

to focus on establishing the Subaru name. In 1975, the company introduced its first station wagon with all-wheel drive – the DL/GL. It is a major automotive milestone, as the first mass production popular priced 4WD passenger car. It spawned a revolution in the mass adoption of 4WD and AWD cars and crossovers.

The 1973 Oil Crisis helped the makers of small cars, and Subaru was no exception. However, Subaru then suffered from Yen/Dollar exchange rate changes which forced FHI to raise prices with a resultant sales drop. With supply now exceeding demand, the company suffered severe losses.

In 1978, the company debuted the BRAT (**Bi-drive Recreational All-terrain Transporter**) to meet the demand for small pick-up trucks in the U.S. A notable owner of a BRAT was President Ronald Reagan.

In 1981, the company was an inadvertent beneficiary of a MITI trade agreement between Japan and the U.S. whereby Japan voluntarily agreed to limit the number of cars sent to the United States. With supply restricted, Subaru added features and raised the average price of its cars from \$6,000 to \$8,000. At this time SOA became highly profitable; however, it was an unsustainable position for the company.

### **1989 - Manufacturing in the U.S.**

In 1989, Subaru, together with Isuzu opened a factory in Lafayette, Indiana called Subaru-Isuzu Automotive, Inc., or SIA. The plant initially produced the Subaru Legacy and Isuzu Rodeo. In 2001, FHI purchased the Isuzu holding for \$1 and renamed the factory as [Subaru of Indiana Automotive, Inc.](#) From 2007 until 2016, SIA also produced the Toyota Camry under license.

In 2003, SIA became the first automotive assembly plant to be designated a Backyard Wildlife Habitat by the National Wildlife Federation. In 2004, SIA became the first automotive manufacturing facility in the U.S. to achieve zero-landfill status.

The plant is currently operating at its highest-ever capacity and produced close to 350,000 Subaru vehicles in 2017, including the Legacy, Outback and Impreza models, marking the first time Impreza has been built in the U.S. The [all-new three-row 2019 Ascent SUV](#), the automaker's biggest vehicle ever, will also be produced at the plant beginning in early summer 2018.

### **1989-1994**

In the late 1980s and early 1990s, Subaru signaled an evolution to its positioning with the introduction of sporty coupe models; the XT in 1986 and the SVX in 1992. The Legacy model, a clear move upscale for the brand, was introduced in 1989.

However, the widening of the brand also caused Subaru to lose its focus on its core American buyers. By 1993, the company was showing record financial losses, high inventory (300-day supply), six consecutive years of declining sales, ineffective advertising, and a confusing brand image.

### **1995-2005**

In 1995, in response to the growing trend for SUVs, SOA launched the Outback – the “World’s

First Sport Utility Wagon.” Supported by a marketing campaign using Crocodile Dundee actor, Paul Hogan, the Outback model helped Subaru sales in the U.S. recover.

General Motors took a 20 percent share in FHI from 1999-2005. In 2004, GM’s subsidiary Saab sold a version of Fuji’s Subaru Impreza - the 9-2x - built by FHI in Japan. In 2005, Toyota Motor Corp. (TMC) paid approximately \$300 million to GM for 68 million shares, equal to an 8.7 percent stake in Fuji. In 2007, TMC paid \$311 million to raise its stake in Subaru parent Fuji Heavy Industries to 16.5 percent. This partnership led to Toyota production by FHI and the development of the BRZ/FRS/86 sports car which debuted in 2012.

The introduction of the WRX to the U.S. in 2001 revived attention in the brand. In 2002, looking to further expand its offerings, the company developed the Baja model, an open bed pick-up, based on the Legacy.

Subaru launched the Tribeca mid-size crossover in 2005, initially as the B9 Tribeca and the model was named after the Tribeca neighborhood of New York City. Produced at SIA in Indiana, Tribeca was developed as a joint-project with GM, with the partner model to be sold as a Saab - however the Saab model was not released. Featuring polarizing design, the model was quickly found to be too small for the U.S. and while the 2008 models received a facelift and a larger 3.6-liter flat-six engine, the model never achieved its planned-for sales and was dropped in 2014 with the announcement of a new, larger 3-row model in the works.

By 2005, Subaru sales were stagnant and the company, now led by Thomas J. Doll, decided that a change was needed.

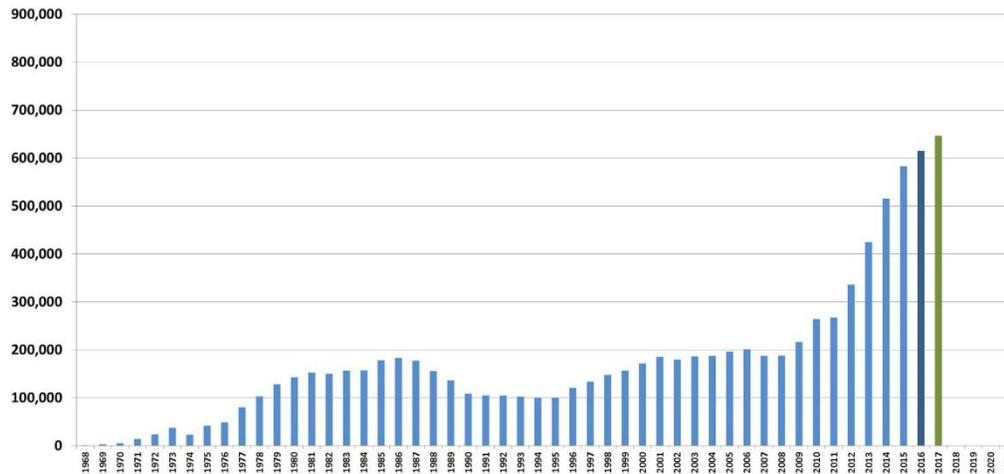

## **2006-2017**

In late 2006, a new creative agency, Minneapolis-based Carmichael Lynch was hired and a new set of emotionally charged advertisements followed. Instead of buying a Super Bowl slot, the company sponsored Animal Planet’s Puppy Bowl.

From 2007, the company readjusted pricing to protect residual values, and Subaru vehicles grew in size to better reflect U.S. tastes. New models; Crosstrek and BRZ were added to the line-up. Focusing advertising on safety, reliability, versatility and performance, Subaru sales in the 10 years from 2007-2017 have risen consecutively from below 200,000 to over 600,000 vehicles per year, and the company’s continued sales growth is currently the longest in the industry. Subaru now outsells many established brands as the seventh best-selling brand in America. An all-new three-row SUV, the [2019 Subaru Ascent](#), was announced for late 2017.

Subaru reported record-breaking sales of 647,956 vehicles for the 2017 calendar year; an increase of 5.4 percent over the previous annual record of 615,132 vehicles set in 2016. This is the ninth consecutive year of record sales for Subaru of America and tenth consecutive year of sales increases.

## Subaru Marketing

Subaru, known today for its highly successful “Love” marketing campaign, has pathed a varied route in its advertising journey. Far removed from today’s successful “Love” positioning, one of the company’s first ads was, “*The Subaru is not a Japanese Beetle.*” Recognizing the need to set itself apart from other foreign carmakers, a second early ad called Subaru “*The economy car for Today’s Economy*” which was appropriate as other importers such as Volkswagen were raising prices. An iconic ad for the 360 was headlined “*Cheap and Ugly Does It*” and another early ad tagline proclaimed that Subaru vehicles were “*Inexpensive and Built to Stay That Way.*”

Through the 1970s, the public perceived Subaru cars as inexpensive to buy and cheap to own. While this was good for initial sales, the company soon needed a stronger, more compelling reason for a wider group of consumers to buy.

In 1975, Subaru introduced four-wheel drive and this allowed the company to strengthen its position as a ‘snow’ car and to capitalize on that, Subaru of America sponsored the U.S. Ski Team and used ads showing a Subaru vehicle taking the team up a snow- and ice-covered mountain.

During the 1990s, celebrities such as Paul Hogan were employed to raise awareness of the brand (specifically the Outback in Hogan’s case). During this period, awareness for the Outback model was strong, often eclipsing awareness for the Subaru brand. Over a short period of time, various taglines were used as the company searched for its identity, such as: “*What to Drive*”, “*The Beauty of All-Wheel Drive*”, “*Driven by What’s Inside*”, and “*Think, Feel, Drive*”.

During this period, Subaru noted its following amongst LGBTQ car buyers and produced groundbreaking ads aimed at the LGBTQ market. The automaker also featured LGBTQ icon and tennis star Martina Navratilova in its national advertising.

However, despite meaningful awareness for the Outback and Forester models, the brand was still lacking a firm identity with the public. In the mid 2000’s, this identity was pinpointed by Subaru of America and current agency of record Carmichael Lynch through an insight into the love that Subaru owners have for their vehicles. At this time, Subaru vehicles were purchased by a core group of loyal owners who often expressed their strong affection and devotion to the brand. This insight evolved into the highly-acclaimed Love campaign, with its tagline, “Love. It’s what makes Subaru, a Subaru.”

The Love campaign emphasizes real-life situations and the emotional engagement of people with life, family, pets and their vehicle while underscoring the inherent safety, versatility and adventuresome nature of Subaru vehicles. This campaign strongly resonates with buyers and has been the recipient of many marketing awards and has formed into the ‘true identity’ of the Subaru brand and the long-lived positioning has represented the brand from 2008 to the present day.

From the idea of “Love”, the company has also developed the [Subaru Love Promise](#) which echoes its commitment to communities and to its customers.

## **Subaru and Motorsport**

The Subaru brand has long been associated with motorsport and in particular rally, a motorsport that highlights the Subaru Symmetrical All-Wheel Drive system, used in most Subaru production models. A Subaru team from STI (Subaru Tecnica International), first competed in the World Rally Championship (WRC) in 1981. In 1990, Subaru ran a Legacy in WRC and from 1993 the smaller Impreza took over. Subaru won the WRC manufacturers' championship three times; in 1995, 1996, and 1997, and the drivers' championship three times; in 1995, 2001, and 2003.

In the U.S., with the introduction of WRX in 2001, Subaru created Subaru Rally Team USA to compete in U.S. rally racing. The team is run by factory technical partner Vermont SportsCar. Subaru Rally Team USA primarily competes in stage rally events and the Red Bull Global Rallycross Championship. The team also competes occasionally in the Canadian Rally Championship, the X Games, hill climb events, and the World Rally Championship.

Well-known racing and action sports personalities have represented Subaru Rally Team USA such as Travis Pastrana, Bucky Lasek, Ken Block, plus legends Dave Mirra and Colin McRae in rally, rallycross, and the X Games.

For rally racing, the combination of Subaru technology and the skill of veteran drivers Travis Pastrana and David Higgins has produced one of the most successful factory motorsports programs in the USA, where Subaru has won the Rally America Manufacturer's Championship title ten times in the last eleven seasons. Travis Pastrana lead the championship for Subaru from 2006-2009, while David Higgins has claimed six consecutive championship titles from 2011-2016. In 2014, David Higgins set a new record of 6:09.09 at the Subaru Mt. Washington Climb to the Clouds hill climb. SRTUSA and Higgins would go on to break another record in 2015, by winning every round of the 2015 Rally America National Championship with the 2015 WRX STI VT15r rally car, a record that had stood since 1987.

From 2013, SOA also developed the record-setting Isle of Man TT cars, driven by Mark Higgins brother of David, which set 4-wheel speed records on the famous TT Bike circuit.

For 2017, the factory team will compete in the new American Rally Association Championship with David Higgins and Travis Pastrana as lead drivers, and the Red Bull Global Rallycross Championship with Chris Atkinson and Patrik Sandell as lead drivers. Higgins and Pastrana will also compete in the 2017 Subaru Mt. Washington Climb to the Clouds hill climb.

## **Subaru Philanthropy**

Subaru of America has long been known as a company that supports social causes and partners with like-minded organizations. SOA created the Subaru of America Foundation in 1984 to support its local communities and since then, more than \$9 million has been awarded through grants, scholarships, and matching employee gifts. The programs are varied but primarily benefit the unemployed and underemployed in communities local to Subaru facilities.

During the end-of-year [Subaru Share the Love event](#), for every new vehicle purchased or leased, the automaker donates \$250 to the customer's choice of pre-selected national or "hometown" local charities. At the culmination of the 2017 event, Subaru hopes to exceed a grand total of

\$115 million donated since the creation of Share the Love to celebrate the tenth anniversary of the event. Between 2008-2016, Subaru donated to honorable causes through Share the Love events, including:

- Subaru has funded the rescue, transport, and adoption of nearly 40,000 animals across the country through the ASPCA.
- Subaru has helped Make-A-Wish grant more than 1,500 wishes.
- Subaru helped deliver nearly 1.7 million meals to America's seniors.
- Subaru has provided funding to the National Park Foundation for vital programs and projects in more than 100 national parks.

## **50 Years of Subaru Products**

### **360**

Production: 1968-69

Subaru 360 debuted in the U.S. in 1968 and was the first car imported by Subaru of America, Inc. The little car was immediately recognizable by its bug-eyed headlights and forward-opening doors. Powered by a 356 cc, 25 hp, two-stroke engine, this microcar reached 50 mph in 37.5 seconds and had a top speed of 69 mph. What the 360 lacked in performance, it made up for in affordability and efficiency with a price of \$1297 and a fuel economy of 66 miles per gallon.

### **FF-1**

Production: 1970-72

The successor to the 360 was the FF-1, a front-wheel drive compact car that was better sized for the American driver. Available in two and four-door models, the FF-1 was the first Subaru to be powered by a horizontally-opposed (boxer) engine. The BOXER engine, a hallmark of Subaru engineering, provided a low center of gravity and better balance and handling. With 61 hp and 65 lb-ft. of torque, the FF-1 had over twice the power as the 360.

### **DL/GL Wagon**

Production: 1973-90

The DL and GL were available in sedan, coupe and wagon body styles; however, it was the wagon that quickly gained in popularity because it introduced Americans to affordable and economical four-wheel drive. In 1975, "On-Demand" 4WD became available for the wagon allowing drivers to switch from front-wheel to four-wheel drive while on the go, by simply pulling a lever next to the shifter. This rugged, go-anywhere car had great appeal to people with active outdoor lifestyles. In response, Subaru of America forged an agreement with the U.S. Ski Team in 1975 to make the wagon their official car and this relationship continued until 1994.

### **BRAT**

Production: 1978-87

BRAT, which stands for **Bi-drive Recreational All-terrain Transporter**, was a rough and tumble vehicle that combined the comfort of a car with the capacity of a pickup truck. Marketed as a "Fun

in the Sun” vehicle, the BRAT was equipped with the same “On-Demand” 4WD as the wagon, giving drivers the capability to explore the great outdoors from the wilderness to the beach. BRAT was also a favorite of President Ronald Reagan, who drove one on his ranch.

## **XT**

Production: 1985-1991

The XT coupe was a bold departure from traditional Subaru design. The wedge-shape and digital dash display made it one of the most futuristic looking cars on the market when it debuted in 1984. The XT had an incredibly low drag coefficient of just .29, which made it one of the most aerodynamic production cars in the world. The XT was known as the Alcyone in Japan - the name referring to the brightest star of the Pleiades star cluster.

## **Legacy**

Production: 1990-Present

The first-generation Legacy ushered in a new era for Subaru with a competitive mid-sized family car with sleek styling, premium comfort and advanced standard features such as multi-point fuel injection, four-wheel disc brakes and four-wheel independent suspension. Legacy offered both Active and Continuous Full-Time 4WD and was powered by a standard 2.2-liter BOXER engine delivering 130 hp and 137 lb-ft. of torque, which outperformed many of the leading competitors in its segment.

## **SVX**

Production: 1992-1997

With Italian design and Japanese engineering, the SVX was the boldest Subaru model to date. The space-age performance coupe was designed by Giorgetto Giugiaro and powered by a 230 hp, 6-cylinder BOXER engine. The cockpit was surrounded by a unique window-within-a-window canopy that gave the driver unobstructed vision and virtually eliminated wind noise when the windows were down. The SVX was both a tribute to Subaru’s aviation heritage and an exercise in progressive design.

## **Impreza**

1993-Present

Introduced in 1993, the Impreza was a big step forward for Subaru in the sub-compact car segment. The all-new model offered more horsepower and torque, greater interior room and a longer list of standard features than its leading competitors. Impreza was the second model in the Subaru line-up with advanced standard features such as multi-point fuel injection and four-wheel independent suspension. The Impreza was powered by a standard 1.8-liter BOXER engine producing 110 hp and 110 lb-ft. of torque and offered Active and Continuous All-wheel Drive. The sporty 2.5 RS, the only generation Impreza ever offered as a coupe, set a precedent for development of the legendary WRX.

## **Outback**

1996-Present

The Outback is Subaru's flagship model known world-over as the "World's First Sports Utility Wagon." What started out as a trim level for the Legacy wagon became a cultural icon synonymous with outdoor adventure. Equipped with a 2.5-liter BOXER engine and symmetrical all-wheel drive and offering 7.5" of ground clearance, the Outback was capable of taking drivers places competitors could only dream. The first-generation Outback is immediately recognizable by its two-tone paint, high ground clearance and a raised roof. The Outback won Motor Trend's SUV of the Year for 2010.

### **Forester**

1998-Present

Known for its large capacity with a small footprint, the Forester was added to the Subaru line-up in 1998. The Forester was an alternative for customers who wanted the same performance and versatility as the Outback, but in a smaller vehicle. The Forester came standard with many of the same features as its larger counterpart including a 2.5-liter BOXER engine, symmetrical all-wheel drive and 7.5" of ground clearance. The Forester was marketed with the advertising tagline "Sport Utility Tough, Car Easy." The Forester won Motor Trend's SUV of the Year in 2009 and 2014.

### **WRX**

2002-Present

The rally-inspired WRX debuted in 2001 powered by a mighty 2.0-liter, turbo-charged, intercooled BOXER engine with 227 hp and 217 lb-ft. of torque, establishing the performance sport sedan segment in the U.S. market. The WRX was designed, tested and proven in its rally form in the world's most brutal motorsport, the World Rally Championship. WRX stands for "World Rally eXperimental" and the car has lived up to its name with multiple titles in the WRC and U.S. rally competition. In 2004, Subaru introduced the WRX STI (Subaru Tecnica International) version of the WRX with a powerful 300 hp engine and signature trunk wing.

### **Baja**

2003-06

The Baja was introduced in 2003 as a new type of crossover that blended the versatility and ruggedness of a compact 4-door pickup truck with the driving dynamics, safety and comfort of a passenger car. The Baja was equipped with Subaru's 2.5-liter BOXER engine and symmetrical all-wheel drive as well as the added benefit of a limited-slip rear differential and a fully independent heavy-duty raised suspension. The multi-purpose vehicle had room for four passengers and a cargo bed for occasional sport and/or utility use. The key to the Baja's versatility was the Subaru-designed Switchback System that allowed the reconfiguration of the rear seating area, as well as the cargo bed, to meet a variety of needs. Based on the Legacy-Outback platform, the Baja was the first model designed in-house by Subaru of America.

### **Tribeca**

2005 - 2014

The Subaru Tribeca mid-size crossover was made from 2005 to 2014. Originally called the B9 Tribeca, the name "Tribeca" derives from the neighborhood of New York City. Tribeca was sold in five- and seven-seat configurations. Produced at SIA in Indiana, Tribeca was developed as a joint-project with GM, with the partner model to be sold as a Saab - however the Saab model was not released. Featuring polarizing design, the model was quickly found to be too small for the U.S. and while the 2008 models received a facelift and a larger 3.6-liter flat-six engine, the model never achieved its planned-for sales and was dropped in 2014 with the announcement of a new, larger 3-row model in the works.

### **Ascent**

Production expected early Summer 2018.

The highly anticipated three-row [2019 Ascent SUV](#) will be the biggest Subaru ever built. Expanding on renowned Subaru strengths, the Ascent delivers an unparalleled driving experience with a spacious interior, comfortable and flexible seating options and a host of new safety, driver assist and in-vehicle technologies. The SUV is built on a strengthened and extended version of the Subaru Global Platform with extensive use of high-strength steel. With a focus on durability, rigidity and vibration resistance, the Ascent platform is designed to provide a quiet interior and excellent driving feel. Powered by an all-new 2.4-liter BOXER engine, the Ascent comes standard with a new version of Subaru's high-torque Lineartronic® CVT (continuously variable transmission) and legendary Symmetrical All-Wheel Drive system— all wrapped in a stylish and rugged design with a commanding presence. The new U.S.-built Ascent will be available in base, Premium, Limited and Touring trim lines when it arrives in Subaru retailers in early summer 2018.

### **About Subaru of America, Inc.**

[Subaru of America, Inc.](#) (SOA) is a wholly owned subsidiary of [Subaru Corporation](#) of Japan. Headquartered at a zero-landfill office in Cherry Hill, N.J., the company markets and distributes Subaru vehicles, parts and accessories through a network of more than 620 retailers across the United States. All Subaru products are manufactured in zero-landfill production plants and [Subaru of Indiana Automotive, Inc.](#) is the only U.S. automobile production plant to be designated a backyard wildlife habitat by the National Wildlife Federation. SOA is guided by the [Subaru Love Promise](#), which is the company's vision to show love and respect to everyone, and to support its communities and customers nationwide. Over the past 20 years, SOA has donated more than \$120 million to causes the Subaru family cares about, and its employees have logged more than 40,000 volunteer hours. As a company, Subaru believes it is important to do its part in making a positive impact in the world because it is the right thing to do.
